

UJL Pty Ltd electronic board repair service

UJL Pty Ltd has the capacity to repair and test older electrical and control boards used in industrial control systems and equipment, especially cards that have many discrete components. In our workshop we have very good test equipment and instruments to test the boards. These includes power supplies and input/output simulators. We have almost 40 years of experience with analogue and digital circuits, and we have many replacement components in our store or access to them in Australia. The service could include

- Cleaning the board and components
- Visual inspection
- Replacing bad parts
- Testing and replacing individual components
- Troubleshooting and repair
- Testing bench with lab power supplies
- Test run for e.g. 24 hrs
- Power consumption measurements
- Written report

We have repaired cards with age of 10 to 40 years, when the customer could not get any spare parts or repair support from the suppliers.
