

As a papermaker, you probably have a few things on your mind—like reducing your machine downtime, increasing your paper output, and protecting worker safety.

Well, I have some good news!

Our upgraded, **4th generation Capto V4** is here today with some long-awaited enhancements:

1. Even easier to handle due to its 20% reduced weight
2. A smoother finish to protect your fabrics and dewatering elements
3. Replacing the spare pads is now easier than ever

Yes, it's still one simple tool, with three incredible results.

Change your felts and fabrics 15 minutes faster

Machine stops should be as short as possible; so your machine clothing should be installed as fast as possible. The Capto is designed to help you do exactly that—reducing your machine downtime so you can increase your paper output.

Make clothing changes safer

The Captos' fast action and new rubber grips will never slip off your felts or fabrics—even if they're wet. You can even tie a rope through the handgrip to pull from a greater distance from the paper machine.

So, you increase worker safety AND reduce the risk of damaging your new felts and fabrics. Win-win.

More paper, more peace of mind

The upgraded Capto is designed specifically for papermakers, by people who understand the demands of life in the paper mill.
